AI Logs - SOEN341 - Sprint 1

Task 1: Define User Stories

Purpose of AI Use: Brainstorming and requirements elicitation

Prompt/Response: <https://claude.ai/chat/92e79791-501a-47b5-a696-668e59b312d1>

AI-Suggested Content: A generated list of 10 user stories for job seekers and recruiters.

Validation: The generated user stories were compared with the system features provided in the project requirements to verify that they were relevant and covered the required functionality.

Decision: Modified and mostly accepted.

Reflection: AI helped generate generic user stories needed for the system features.

Responsible Person: Ariana Giami

Task 2: Flask Backend Setup

Purpose of AI Use: Set up the Python/Flask development environment for the backend.

Prompt/Response: <https://chatgpt.com/c/6ab7ee85-8560-83ea-bb1c-3d5fc5abbb5a>

AI-Suggested Content: Step-by-step instructions for creating a virtual environment, installing Flask, creating app.py, and running the Flask development server.

Validation: Followed instructions in the WSL environment and verified that Python 3.12.3 and Flask were successfully installed.

Decision: Accepted the AI guidance and implemented the setup.

Reflection: AI helped explain the backend setup and the purpose of the virtual environment, which was useful because I was new to Flask and backend development with GitHub.

Responsible Person: Ariana Giami

Task 3: Implement US-02 Profile Management Backend

Purpose of AI Use: Code generation, backend implementation and guidance

Prompt/Response: <https://chatgpt.com/c/6ab94940-f2ec-83ea-ba7e-ce59152c15bd>

AI-Suggested Content: AI suggested:

- A POST /api.profiles endpoint to create a profile.
- A GET /api.profiles/<profile_id> endpoint to retrieve a profile.
- A PUT /api.profiles/<profile_id> endpoint to update a profile.
- Input validation and unit tests

Validation: The generated code was reviewed against the US-02 acceptance criteria. The implementation was tested using `python -m unittest test/test_profiles.py -v`, and all 7 backend tests passed.

Decision: Modified and accepted.

Reflection: AI helped explain Flask backend concepts and provided a simple starting point for implementing the profile management endpoints.
